

Generating a Low Carbon Future

Tue 19th May 2009, 09:30- 17:00, Tote Suite, NEC, Birmingham

Integrating decentralised, intelligent and renewable energy for public and private regeneration projects, including local government buildings, schools, hospitals and universities as well as social housing is a key objective for delivering a low carbon future.

Over the next period 2009 – 2012 £billions will be invested through these projects including refurbishment of existing building stock, private and public which should feature the inclusion of DE, IE and RE systems with ESCO's assisted by renewable feed – in tariffs (up to 5 megawatts).
