

Responding locally to the 2030 UN Global Climate Change Emergency

Making our Fair Green Solar Future

7pm (doors open) 7.30-9.00 Wed 27 October 2021

United Reform Church 10 Warwick Rd Coventry CV1 1EX

The UN science-based climate emergency requires a 50% cut in current carbon emissions by 2030 to contain global warming within 1.5 degrees to avert irreversible catastrophe for life on earth. Coventry and Warwickshire recognise the dual challenge to urgently address local atmospheric pollution and global warming from using fossil fuels. The common solution is replacement with clean green energy and technologies mostly generated locally, combined with resource efficiency.

Chair: Zarah Sultana MP

Coventry South Constituency

Leading advocate and campaigner for the Green Clean and Fair New Deal

Cllr John McNicholas

Lord Mayor Coventry City Council

Susan Juned Director Heart of England Community Energy

A 55,000-panel solar farm run by and supporting local and global charities

Angus Rose Director

Ineco Energy Ltd

Currently installing solar panels on 33 Coventry Council buildings, also six schools and 3 libraries.

Nancy Toure BDM

Green Energy Together Ltd

Renewable energy installers

Tony McNally Managing Director Climate Change Solutions Ltd

This is on the eve of the decisive challenge for the UN COP26 starting 1/11/2021 hosted by the UK Presidency in Glasgow. Prior commitments of the top 30 world leaders whose countries currently account for 85% of carbon emissions fall far short of containing rising global warming within 1.5 degrees by 2030, including the UK.

Coinciding with this is a further energy supply challenge which highlights the dual imperative to maximize generating multiple times the current level of renewable power, heating, and transport nationally and locally.

This public event will showcase the potential to generate from multiple sources many times greener clean solar power today, creating new jobs both in manufacture, installing and servicing. The presentations highlight the latest installation of 5,000 solar panels on 41 Coventry buildings with publicly funded. Also, the Warwickshire located Heart of England Community Energy solar farm with 55,000 panel, owned by its community investors with a new Bond to be launched at the event. Also, the CCS Ltd led project with Warwick University students producing extensive solar mapping of large clusters of Coventry's south facing and flat roof buildings, with the potential to generate multiple times its existing green power.
