About Us

For more than a decade, our team has designed, engineered, installed and maintained tens of thousands of domestic rooftops and commercial solar power systems across the UK.

Our experience covers all facets of solar - from large-scale ground mount to bespoke designs and a number of historic British landmarks, such as King's College Hospital and Paddington Train Station.

- Established in 2009
- 400+ MW of solar energy generated
- 500+ Systems installed in British Business
- 320 MW of ground mount solar installed
- UK wide installations

Our Solutions

PV Systems

Ground Mount Solar Farms

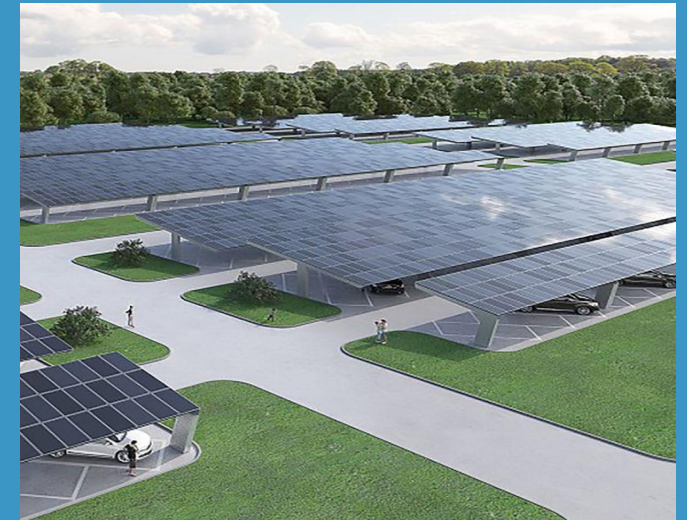

Solecco Solar Tiles

**Scaffolding
Solutions**

EV Chargers

Solisco Car Ports

King's College Hospital

English heritage protected building

King's College Hospital is an acute care facility managed by King's College Hospital NHS Foundation Trust. It was opened in 1840 in the disused St Clement Danes workhouse. Our team was honoured to be trusted with the installation of the whole PV system and all labour required.

Moss Electrical

Bespoke design

Operating since 1992, Moss Electrical is one of the UK's largest electrical wholesalers.

"We couldn't be happier"

"Using our logo as part of the design of our system was simply a brilliant idea. We are deeply pleased and impressed with the quality of work that the Green Energy Together team delivered"

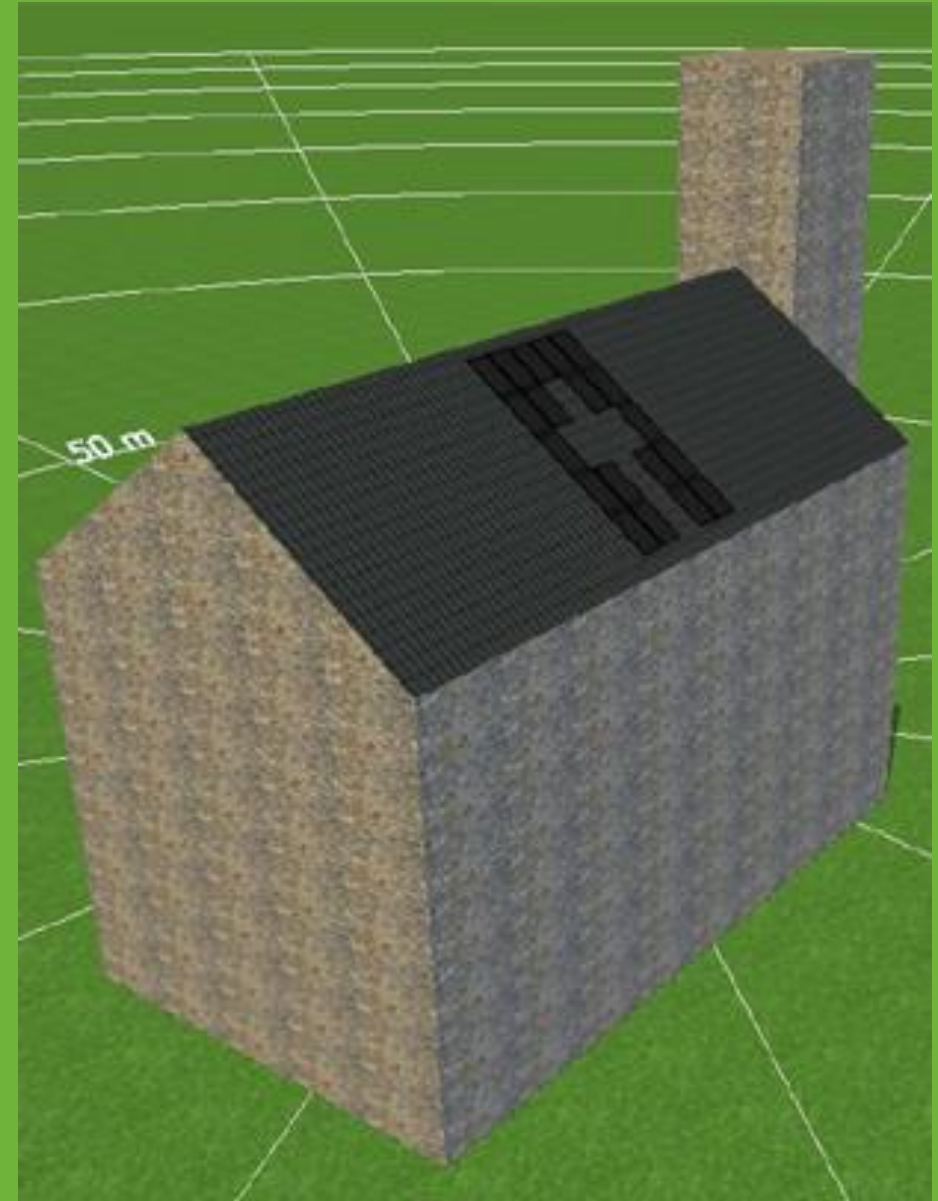

Mr. Robert Moss, Moss
Electrical Managing
Director

Industrial and Commercial solutions

We offer a one-stop service for all your needs, from consulting and design to installation and lifetime maintenance. Our package offers a full assessment of your energy consumption profile, with an obligation-free report.

We take care of the entire project, from grid connection to certification, plus a 2-year guarantee.

In combination with our specialist teams, this allows us to provide some of the most competitive prices and service packages in the market, without compromising in service, quality and aftercare.

Operations & Maintenance

Our dedicated Operation & Maintenance team provides O&M and asset services, making sure your set-up performs optimally.

We offer :

- Preventative maintenance scheduling
- Full system monitoring and control
- Fault rectification
- Ensure savings for power plant owners through preventive maintenance
- High-quality data analysis from the latest software

Our Accreditations

At Green Energy Together we aim to provide the highest level of service to our customers and internal quality controls to ensure that all our products and services are delivered at the highest standard. Our industry-recognised national and international certifications say it all.

Community Energy Schemes

Solar For Everyone

- An increasing number of communities and housing associations are taking advantage of the support available from investors, private organisations, and governmental programs to bring renewable technology to their locality while generating revenue for the organisation.
- Social or community energy can take many forms. In some cases solar technology is provided at no cost to tenants, landlords or the housing association.
- A percentage of the energy generated is used to power tenants' homes and communal areas, while the remaining is sold to a licensed supplier or the national grid for use off-site.
- The council or association receives a payment for every installation.

South Cambridgeshire Council

South Cambridgeshire District Council is the local authority for the district of South Cambridgeshire in Cambridgeshire, England.

South Cambridgeshire Housing Department partnered with our team to install solar panels at over 1,000 properties across the district

Working with third party funders we have installed over 40,000 domestic size solar pv systems to our social housing partners including Housing Associations and Councils.

Solar Together London & Devon

Social Values

NHS & Armed Forces - We are offering the NHS and Veterans a discount on their solar installation with a unique voucher code link.

Local Businesses - Where we are required to use sub-contractors, such as Scaffolding contractors, we look to use locally based companies, which helps support local business as well as reducing Carbon Miles, as the contractor is local, they will have to travel less miles to sites.

Green Energy Together Office Our own office is fitted with solar panels to reduce our own dependant on the grid and reduce our carbon footprint, we also have two EV chargers installed which are free to use by our employees and visitors to the office

Educational Workshop - For our previous contract in Plymouth, we have put on workshops for local schools and businesses to demonstrate how Solar PV works and the positive impacts it has on the environment
